State-of-the-art Manufacturing Processes

We manufacture our products at our own production facilities. Our production facility which is located in Pelhřimov (Czech Republic), is the largest paint rollers production in Europe. On our automated production lines we apply state-of-the-art technology that contributes to increasing the profitability of production.

Wherever our production is located, equally high standards and quality requirements developed by our corporate group apply to it. Close monitoring of all production processes ensures consistently high quality in all the products we manufacture.

High Delivery Reliability

Thanks to logistics centres and sales companies in Europe and Asia, we are always close to our clients. Our logistics centres are located throughout Europe: from Finland to Spain, from the UK to Russia. In this way, we provide the highest delivery quality and reduce delivery times.

Key Facts and Figures about the Storch-Ciret Group

Annual production:

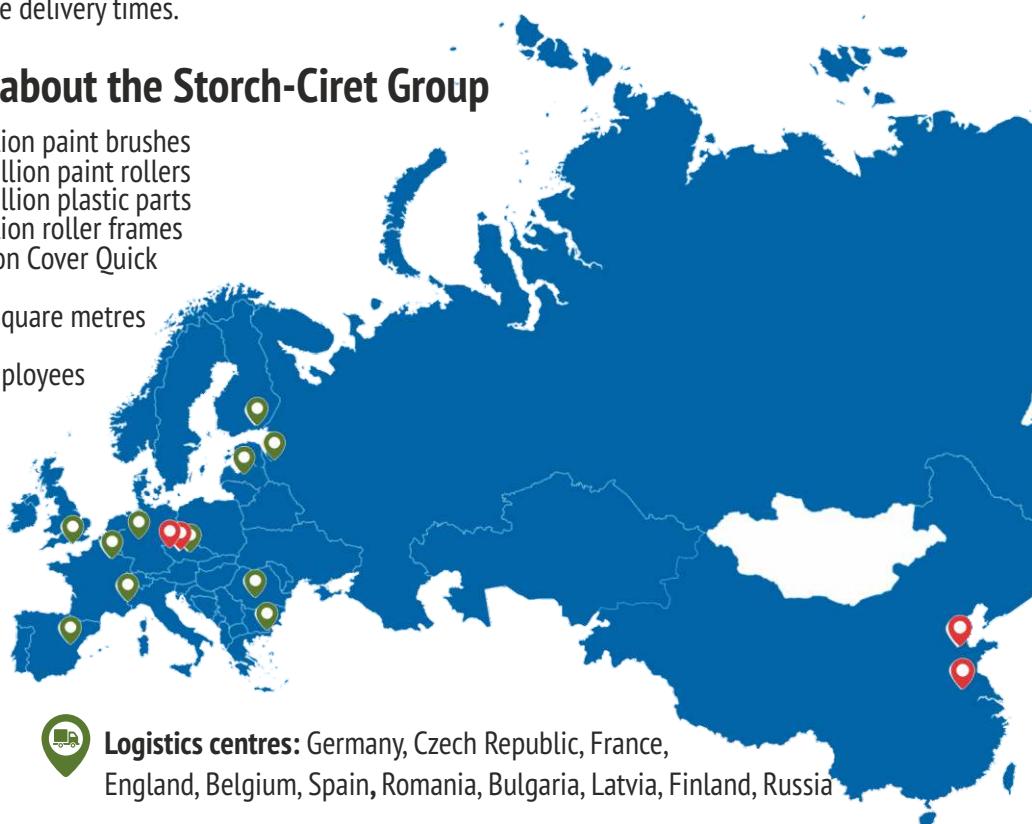

- > 10 million paint brushes
- > 160 million paint rollers
- > 225 million plastic parts
- > 25 million roller frames
- > 8 million Cover Quick

Production and storage areas:

40 000 square metres

Number of employees:

1400 employees

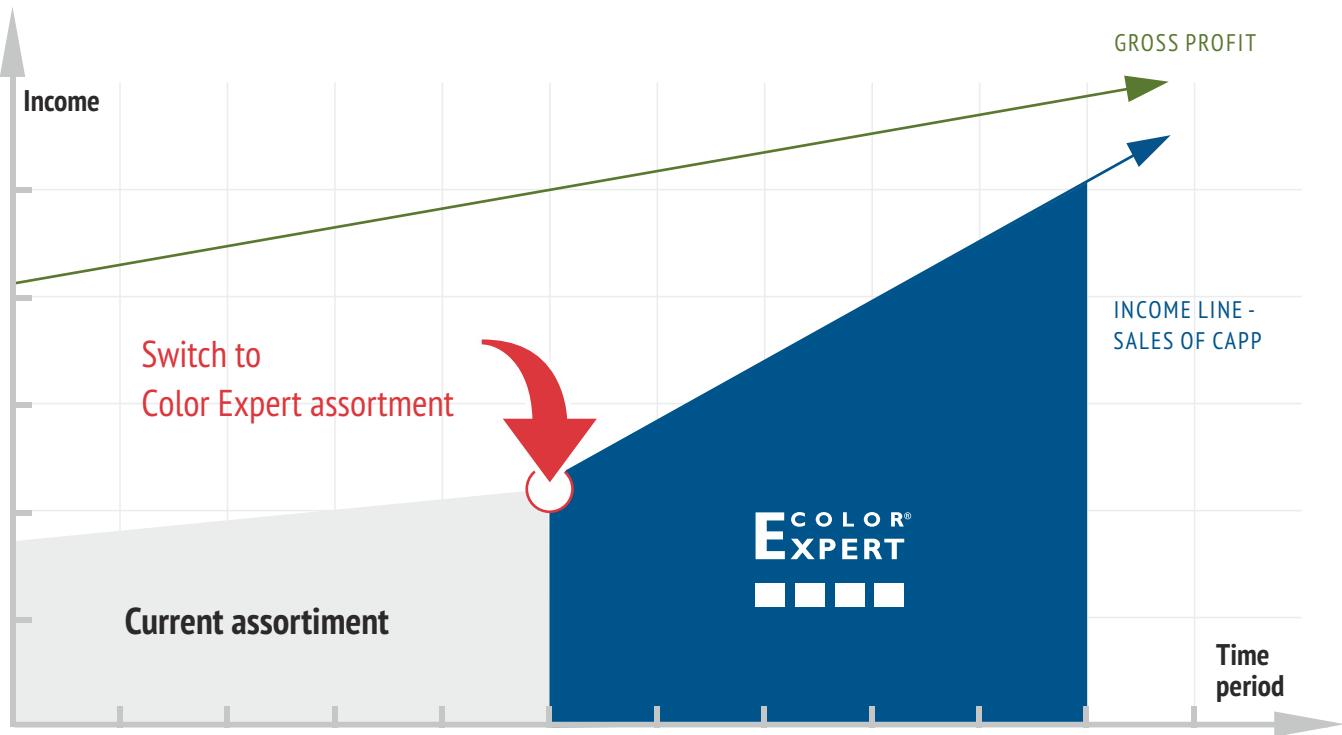

Own production facilities:
Czech Republic, China

Logistics centres: Germany, Czech Republic, France, England, Belgium, Spain, Romania, Bulgaria, Latvia, Finland, Russia

Painting and Plastering Tools From Professionals

A structured product assortment designed to meet the needs of the end customer (both DIY and professional clients) contributes to high incomes for your paint as well as painting and plastering tools departments.

Our three steps to start a successful cooperation

1

Development of a balanced assortment based on the sales of paints and varnishes at point of sale as well as harmonisation of painting and plastering tools

2

Analysis of the range offered by existing supplier (items, one after another). **Elimination of mistakes** in the trading matrix

3

Professional support (trainings, merchandising, promoters, marketing solutions)

Guaranteed increase in sales of painting and plastering tools in the paint segment (up to 20 % of paint and varnish sales with min. 80 % representation)

The Color Expert Concept,
the Winner of the
German Brand Award

COMPONENTS OF A SUCCESSFUL BUSINESS

- The assortment structure, which is clear and logical from the point of view of the buyer, with a clear division according to the types of work as well as types of paints and varnishes ensures convenience and correctness of choice.
- The concept gives answers to the most important questions of the buyer in relation to the kind of material, the surface type, and quality.
- A balanced and optimal assortment is formed individually according to the needs of a particular client, based on the availability of different types of finishing materials at the store as well as on their sales.

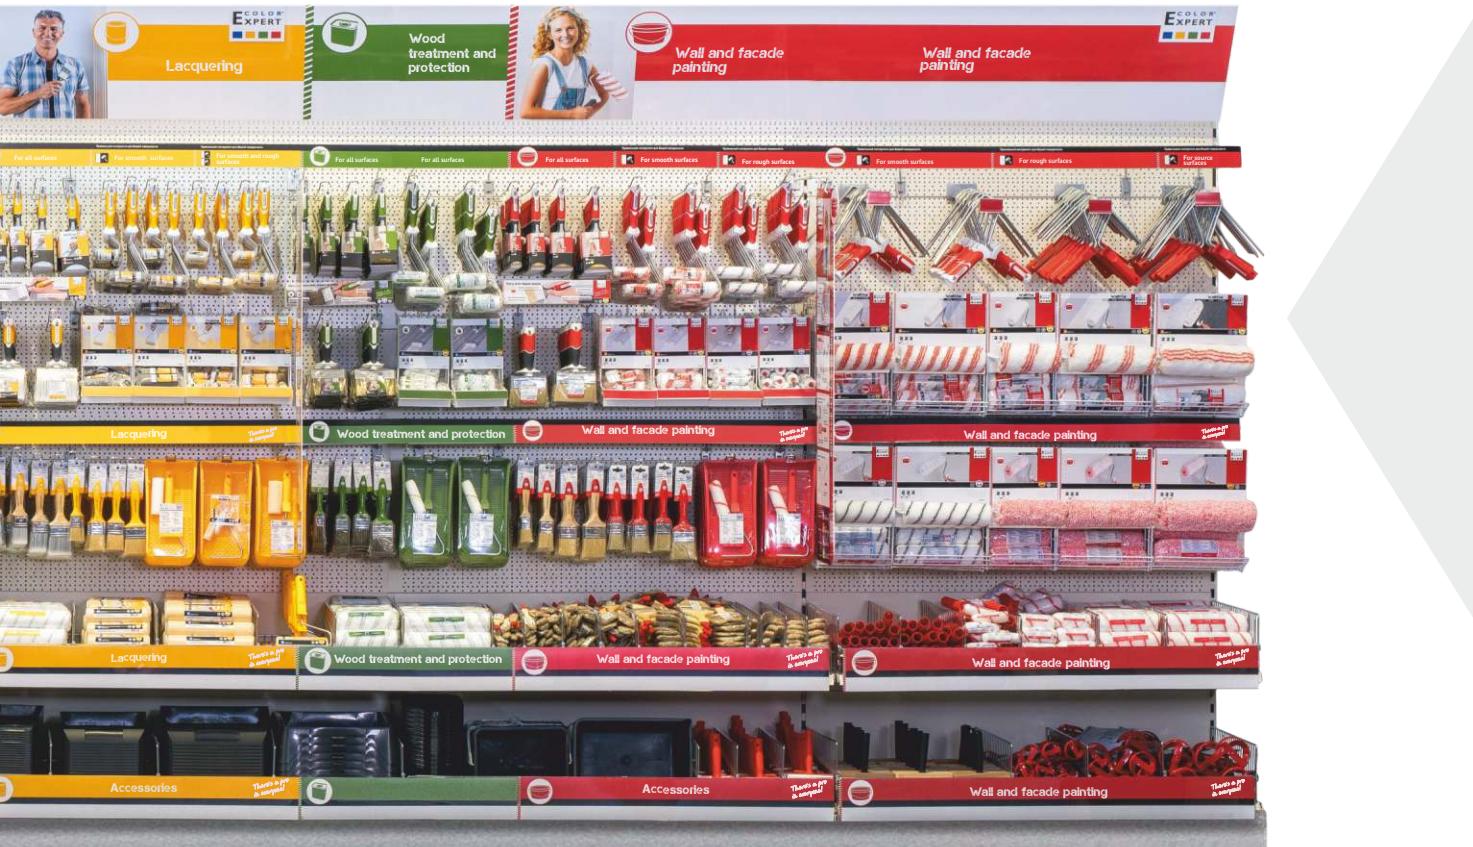

Lacquering

Wood
Protection

Wall and facade
painting

Tools for applying the paintwork materials

Advantages for owner of the shop

- Reduction of the investments in product inventory and staff of the sales area
- Increase in sales and gross revenue of the product category/shop
- Increase in the amount of the average check and price of SKU sold
- Differentiation from competitors

Advantages for a purchasing manager

- Increase in sales per 1 SKU and sales area
- One product assortment that covers all types of lacquer and painting materials, all levels of quality and types of surface
- Supplier's support in sales of the product

Advantages for an end user

- Quick and correct selection of the tool
- Satisfaction with the end results
- Credibility of the seller

TYPES OF CONCEPTS

TWO-MODULE CONCEPT

THREE-MODULE CONCEPT

FOUR-MODULE CONCEPT

FIVE-MODULE CONCEPT

What is important for the customer?

Three-direction thinking

Color Expert concept answers to all three questions:

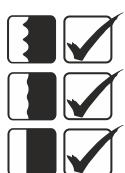

- + For what type of material will be used?

- + What is desired result?

- + For what surface will be used?

Pictograms for the correct and easy selection of a paint roller

There are no two paint rollers alike and no two paint brushes either. There is a wide range of products available. When choosing the perfect tool, surface texture plays a crucial role. We help the end user to find the right product with our pictograms. Is the surface smooth, rough or coarse? What additional characteristics does the product have? Important and visual information is always before your eyes. They follow the pictogram at the point of sale. So they always have the perfect tool in their hands, and, as a result, they have an excellent end result.

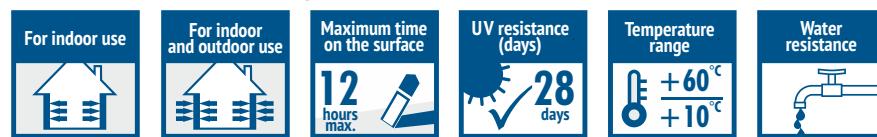

Smooth, rough or coarse surface

When choosing the correct paint roller, the surface structure is crucial (if it is surface smooth, rough or coarse). The relevant pictogram will help you in discovering peculiarities.

Pictograms relating to a paint roller's special properties

Pictograms relating to masking tapes special properties as well as relating to the special properties of cover film with masking tape

Levels of price and quality, and product class segments

Consistent classification: we present our range of products for all areas of use according to product quality. Top-class products in respect to their quality and price (TOP) are at the top, middle class segment products (PROFI) and entry-level class segment products (BASIS) are underneath.

Pictograms relating to paint rollers

The customer chooses a paint roller based on the surface texture that they plan to paint.

Pictograms relating to masking tapes

Pictograms relating to masking tapes will help the customer choose the appropriate masking tape depending on the surface texture and days of use.

Good product, better product, or the best product

GOOD

The icon shows that the price of good is lower than the average one. Products belonging to this price group are relevant for those customers who do not pay much attention to the quality of the result.

BETTER

The assortment of products of the average price and quality level is marked with a silver icon.

BEST

Golden icons on the products say the following: Here you can find tools which correspond to the highest quality level.

Xpert pictograms

Xpert pictograms indicate unique features: optimal design ergonomics, excellent result on the surface, quick work completion and environmental friendliness of products: with our pictograms, the end user will be able to find out what qualities distinguish this or that product from others.

XpertErgo

...indicates convenient use.

The ergonomic shape of the tool meets users' needs optimally. The user will be less tired when working, which means that productivity will increase.

XpertSpeed

... indicates high workflow speed. The tool ensures easy and quick work completion.

XpertFinish

... indicates an excellent result.

Tools with this pictogram allow you to obtain the perfect final result.

XpertPlanet

... indicates the environmental friendliness of products. For example, we use wood obtained exclusively in accordance with the principles of sustainable forest management.

LACQUERING

Painting tools for applying different kinds of lacquer

The right tool for your surface

For all surfaces

For smooth surfaces

The right tool for your surface

For smooth and rough surfaces

We strive for continuous improvement!

Considering a wide range of existing water-based varnishes and varnishes containing solvents, Color Expert has developed universal series of paint rollers and brushes. Our painting tools for applying different types of varnishes will help you achieve excellent results regardless of what material is applied using these tools.

Lacquering

There's a pro in everyone!

ROLLERS/REFILLS FOR ALL TYPES OF LACQUER

**FOR SMOOTH
SURFACES**

One roller for all types of laquer

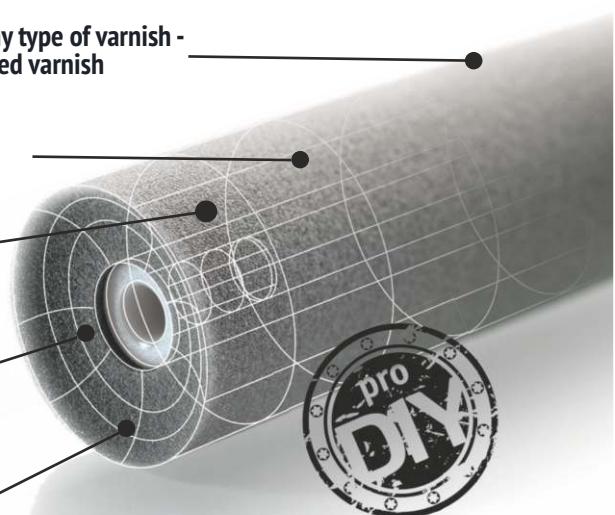

The roller is suitable for any type of varnish -
water based or solvent based varnish

Specially treated pores for optimal
paint transformation

Thanks to low pressure on sides of the roller,
it does not form streaks and porous structure
provides the optimal use of the paint

Patented concave end surfaces

Larger area coverage in comparison
with conventional rollers with rounded edges

NEW

Superfine foam paint roller **EvoStar**

- 3K handle PowerMaster
- Smooth and bubble-free application due to the concave ends
- Specially enhanced foam structure for optimal lacquering
- Greater coating width compared to conventional curvatures

WOOD PROTECTION

Painting tools for applying liquid paints and varnishes:
wood protection materials, impregnation, primers, etc.

The process of applying the material will become much easier.

Taking into account the various degrees of viscosity of wood protection materials as well as of very liquid materials, we selected an optimal assortment of painting tools with the best characteristics in relation to absorption of paints and varnishes, their retention and uniform distribution on the surface.

WOOD PROTECTION

Painting tools for applying liquid paints and varnishes: wood protection materials, impregnation, primers

WALL AND FAÇADE PAINTING

Tools for applying water-dispersible, latex and other water-based paints

The Color Expert paint rollers have their own special purpose depending on the surface texture of the interior walls, ceilings or facades. This ensures maximum performance, a cost-effective paint distribution and an excellent final result. Color Expert paint rollers with different pile length, with and without support, are designed for various tasks and surfaces with water-based paints produced by any manufacturer. Within the range of paint and finishing brushes with high-quality bristles, all the necessary types and sizes are represented.

Wall and fasade painting

*There's a pro
in everyone!*

There's a pro
in everyone!

Increase Your sales

The cross merchandising system is one of the key elements of increasing the turnover of painting tools at the store. A store usually has such a structure that the paint department as well as the painting tools department are not located in the most visited part of the store. Thus, without the use of additional displays, the sale of painting and plastering tools will depend only on clients coming to the paint department. It is possible to significantly increase the sales of painting and plastering tools by placing additional displays in other departments as well. Our experience shows that additional sales are generated by wallpaper tool displays in the wallpaper department, spatula and trowel displays – in the dry mix department as well as with additional displays in the paint department, by placing the tool next to the paint it is to be used with.

On the picture, you can see the store. The paint department as well as the Color Expert concept are located in the farthest corner. At the same time, the red elements indicates different places and options for placing additional displays. Similarly, the Color Expert Cross merchandising system will enable the equipping of the entire store, resulting in an increase in sales of the painting and plastering tools group.

Main tasks Cross merchandising system solves:

- The right tool is located next to the appropriate material, with which it is intended to be used
- Promotions relating to the materials in the store: an increase in the average bill during the promotion of the materials
- Sale of goods: pricing action
- Impulse product: checkout area
